Grading

- Fill in

What will you learn?

- Birds eye view:
  - How to represent written and spoken language in a useful way
  - How to frame language understanding as a tractable statistical inference problem
  - How to evaluate the performance of language and speech processing systems
  - NLP systems building experience

- Canopy view:
  - State-of-the-art language modeling methods
  - Common NLP tasks (e.g., NER, QA) and their relation to various technologies (e.g., chatbots)
  - A perspective of how NLP has evolved and where it's headed
  - You will learn to use powerful tools within the NLP ecosystem
    - DL packages (e.g., Pytorch, Tensorflow, MXNet)
    - The *transformers* library
    - GPU computing
